

Rishik Vadapalli | Full Stack Java Developer

Edmond, Oklahoma, 73034 | rvadapalli2002@gmail.com | +14796578779 |

LinkedIn: www.linkedin.com/in/rishik-vadapalli

PROFESSIONAL SUMMARY

Full Stack Java Developer with **5 years** of experience architecting and delivering scalable, high-performance applications across **Financial/ Banking E-commerce, Healthcare**. Proficient in building **microservices architecture** with **Java, Spring Boot**, and deploying cloud-native solutions on **AWS, Azure**. Experienced in both backend and frontend technologies including **REST APIs, Hibernate/JPA, Angular/React, HTML, CSS**, and **JavaScript**, and automate **DevOps pipelines** using **Docker, Kubernetes, Jenkins** for efficient software delivery. Recognized for transforming legacy systems, optimizing **SQL, MySQL, PostgreSQL** and **NoSQL** performance, and strong understanding to **SDLC, Agile methodologies**, and version control tools like **Git, Bitbucket**, along with collaboration platforms such as **Jira**, and **Confluence**

TECHNICAL SKILLS

- Programming Languages:** Java 17, Java 13, Java 8, SQL (Advanced)
- Frameworks:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, JSP, JVM, JavaBeans, JDBC, Material UI, J2EE, Spring WebFlux
- Frontend Technologies:** HTML5, CSS3, Bootstrap, Redux, JavaScript, Angular, React, Vue.JS, Next.JS, Node.JS, JSON, AJAX, Type Script, SOAP
- Backend Technologies:** RESTful APIs, Microservices Architecture, JWT, OAuth 2.0, GraphQL, gRPC
- Databases:** MySQL, PostgreSQL, Oracle, MongoDB, JDBC, Spring Data JPA, Cassandra, Redis, Elasticsearch, Flyway
- DevOps & Build Tools:** Maven, Gradle, Jenkins, GIT, GitLab CI/CD, Docker, Kubernetes, GitHub, Bitbucket, Terraform, SonarQube, Nexus
- Cloud Platforms:** AWS, EC2, S3, ROSA, OpenShift, ElastiCache, Lambda, RDS, CloudWatch, Azure App Service, SQL Databases, Data Lake, Data Factory, Blob Storage, GCP, API Gateway, VPC
- Testing Tools:** Junit, TestNG, Mockito, Postman, REST Assured, Selenium, Cypress
- Monitoring & Logging:** Log4J, SLF4J, ELK Stack, Prometheus, Grafana, Dynatrace
- API Documentation:** Swagger, Postman collections, OpenAPI
- Messaging & Integration:** Kafka, RabbitMQ, WebSocket's, ActiveMQ, Solace, SNS
- Project Management & Agile:** JIRA, Confluence, Agile/Scrum Methodologies

PROFESSIONAL EXPERIENCE

Full Stack Java Developer, Citizens Bank, Edmond, Oklahoma, Remote

July 2025 – Present

- Developed and maintained **end-to-end financial applications** using **Java, Spring Boot, Hibernate, WebMVC** and **RESTful APIs** for loan processing, payment gateways, and account management, improving transaction efficiency by **25%**
- Designed and implemented responsive **front-end** interfaces using **ReactJS, TypeScript, HTML5, CSS3, JavaScript**, enhancing user experience and reducing client-reported UI issues by **30%**
- Implemented **robust security mechanisms** including **OAuth2, JWT, SSL/TLS encryption**, and adhered to financial compliance standards such as **PCI-DSS** and **data protection regulation**
- Built and optimized microservices architecture with secure API communication, enabling faster integration with third-party financial systems, reducing onboarding time by **20%**
- Deployed **AWS services** including **EC2, S3, RDS, Elastic Beanstalk, API Gateway, IAM, Codepipeline, CloudWatch, Lambda, CodeBuild, CloudFront, SSM, CloudFormation, IAM, Aurora, EFS, VPC**, resulting in **35%** lower infrastructure costs 40% faster deployment zero downtime errors
- Optimized **Oracle, Cassandra, Redis, MongoDB, Microsoft SQL Server** queries, improving database performance and report generation by **35%**
- Implemented **Infrastructure as Code (IaC)** using **Terraform, Helm, Ansible** and **AWS CloudFormation** to automate provisioning, configuration management, and ensure secure and repeatable deployments
- Automated unit and integration testing using **Junit, Mockito, Cucumber** and **Selenium**, increasing code coverage by **25%** and reducing production defects by **15%**, developed **unit, integration, and regression tests** using **JUnit, Mockito**, ensuring high test coverage and application stability
- Designed and implemented event-driven and message-based systems using **Kafka/RabbitMQ**, ensuring real-time transaction processing
- Developed data access layers using **Hibernate ORM** and **MyBatis** to map relational data into java objects, reducing boilerplate **SQL**
- Deployed applications to **AWS cloud** with **CI/CD pipelines (Jenkins, GitLab CI, Docker, Kubernetes)**, enabling 2x faster production releases
- Collaborated with Business Analysts and Financial Operations teams to gather requirements and convert them into scalable technical solutions, reducing rework effort by **20%**

Full Stack Java Developer, Walmart, San Francisco, CA, USA

Aug 2024 – June 2025

- Designed and developed scalable **RESTful microservices** using **Java, JavaScript, Hibernate, Spring, Spring Boot** and integrated them with **Angular frontend** to deliver high performance enterprise features across multiple departments and improve API response by **30%**
- Created dynamics **Angular** and **NodeJS** components for internal dashboards, improving UI performance by **25%** and reducing code redundancy
- Deploying **Microsoft Azure AKS, Azure SQL Database, Blob Storage, API Management, Azure DevOps Pipelines, Event Hubs, Key Vault, App Service, Virtual Machine** cutting infrastructure costs by **20%** and deployment errors by **40%**
- Automated **CI/CD** using **Jenkins, Docker GitHub Actions, Bitbucket** and **Kubernetes**, enabling **90%** faster deployments with zero down time
- Experienced in working within **Agile methodology**, including **Spring planning** daily standups, **Sprint reviews**, and retrospectives
- Created detailed **API documentation** with **Swagger/OpenAPI**, enhancing integration speed and reducing miscommunication across front and back

- Optimized **Oracle, SQL, MySQL, PostgreSQL** and **MongoDB** queries, achieving **35%** improvement in report generation and database performance
- Integrated payment and analytics services, increasing operational efficiency by **15%** and Boosted test coverage **92%** using **Junit** and **Mockito**, reducing post-release defects by **40%**
- Experienced in working within Agile methodology, including Spring planning daily stand-ups, sprint reviews, and retrospectives
- Collaborated with **product Owners, QA Engineers** and **UI/UX designers, Data Engineers** and **managers** teams to deliver sprint-based, release ready features every two weeks

Full stack Java Developer, Adobe, Remote

Oct 2022 – July 2023

- Designed and developed high-performance, scalable full-stack applications using **Core Java, J2EE, Spring Boot, Spring MVC, Spring Security, Hibernate, ReactJS** and **Microservices architecture** to support driven and data-intensive platforms
- Build and maintained **RESTful APIs** and **microservices** using **Spring Boot** and **Spring Cloud**, Ensure **API security** with **OAuth2, JWT authentication**, and **Spring Security**, ensuring low latency and high throughput for real-time data processing systems
- Implemented **CI/CD pipelines** using tools like **Jenkins/ GitLab CI**, automating build, test, and deployment processes to improve release efficiency
- Integrated backend services with high-performance databases **complex SQL queries**, stored procedures and platform data migration, integrate with **NoSQL databases, MySQL, PostgreSQL** such as **MongoDB**, optimizing queries for large – scale data workloads
- Designed and implemented modular **Java components** adhering to SOLID principles, increasing code maintainability by **50%**
- Conduct integration testing and participate in code reviews to ensure **code quality** and performance optimization, identify and **fix bugs, memory leaks** and performance bottlenecks
- Deploy applications on **Docker, Kubernetes** and Cloud platforms **AWS (S3, EC2, EMR, Lambda, CodeBuild, RDS, DynamoDB, Serverless, Microservices, AWS CLI)**
- Conducted **code reviews, performance tuning**, and **debugging**, improving system reliability and reducing production issues
- Followed **Agile (Scrum) methodologies**, actively participating in sprint planning, daily standups, and retrospectives using **Jira** and **Confluence**
- Monitored application performance using **logging** and **monitoring tools**, proactively identifying and resolving bottlenecks
- Collaborated with cross-functional teams including **Data Engineers, AI/ML teams**, and **DevOps** to build end-to-end solutions aligned with **AI** and accelerated computing ecosystem

Java Developer, Cigna Healthcare, Remote

March 2021 – Sep 2022

- Developed healthcare logistics models using **Core Java, JavaScript, Spring Boot**, and **ReactJS, TypeScript** supporting efficient drug inventory tracking across 1k+ locations
- Experience in deploying **Microsoft Azure AKS, Azure SQL Database, API Management, Azure DevOps Pipelines, Event Hubs, Key Vault, Virtual Machine, App Service** and followed **Agile methodology**, participated in daily stand-ups, and contributed to **sprint planning** and retrospectives
- Build scalable, high-performance **REST APIs** using **Spring Boot, Spring Cloud, Hibernate** and **Spring MVC** frameworks
- Apply **multithreading, exception handling**, and collections frameworks for efficient performance, write **clean, reusable** and **maintainable code** following best software engineering practice
- Implement **caching, logging** and **asynchronous** processing, develop and integrate **RESTful Web Services** and **SOAP APIs**
- Created **Docker** applications and worked on container orchestration for cloud-native deployments, reducing onboarding time for new services
- Wrote and maintained **PostgreSQL, DynamoDB, Oracle** using **JDBC** and **JPA** queries and procedures for healthcare order management systems
- Participated in peer code reviews, version control via **Git, Gitlab** and used **JIRA** for agile tracking and task management
- Collaborated with cross-functional teams including **BA, QA** and **DevOps** to ensure HIPAA- complaint software development

Java Developer, Insta Global Source (Internship), Hyderabad, India

January 2020 – February 2021

- Built and enhanced internal compliance dashboards using **Java, Spring MVC, JavaScript** and **Angular** providing real-time insights into regulatory reporting and cutting manual work
- Integrated applications with **core banking systems, third-party payment gateways**, and **financial APIs**, ensuring reliable and secure data exchange
- Optimized database performance using **SQL, Oracle** for handling high-volume transactional data
- Worked on **fraud detection** and risk **monitoring systems**, collaborating with analytics teams to integrate rule-based and driven models
- Designed and implemented modular **Java components** adhering to SOLID principles, increasing code maintainability
- Developed batch processing jobs for trade data validation and exception handling using spring Batch
- Deployed applications to **AWS cloud** with **CI/CD pipelines Jenkins, GitHub Actions** automation and ensured deployment reliability across dev/test/prod environments and ensured data integrity and auditability by following financial data governance practices
- Conducted code reviews, performance tuning, and root cause analysis to maintain system reliability and minimize downtime
- Followed **Agile methodology**, participated in daily stand-ups, and contributed to sprint planning and retrospectives

EDUCATION

Master of science in computer science, University of central Oklahoma, Edmond, Oklahoma, USA
